P3S Documentation

Content

This folder contains definitive documentation for the protoDUNE prompt processing system (p3s). - the "src" subdirectory contains the source files are stored - the "pdf" subdirectory contains the final product, files in the PDF format - the "graphics" subdirectory contains some illustrative visual materials, but these images are not necessarily a part of any other document.

Documentation covering p3s clients is split into separate files for convenience. Of primary interest to the end user is the *JOB* document.

A PDF version of this "README" is included in the pdf directory.

Creating PDFs

In case anyone want to rebuild a PDF (perhaps from a fresher **md** source) -

```
pandoc -s -o README.pdf README.md
```
